

Determine responsibility for water service

Updated 12/05/24

The water district is responsible for:

- The district's outlet-side meter coupling.
- The underground connection to the water main at the street, called a corporation or corp stop.
- The service line from the main to the inlet side shut off valve, called a curb stop or angle stop. Also includes the U-branch, if present.
- The water meter, water meter box, and meter box lid.
- Generally, everything that is brass inside of the meter box.

The customer is responsible for:

- The connection to the district's outlet-side meter coupling.
- The customer service line that takes water from the meter to the house.
- The house valve, used to shut off water service at the home. Usually on the side of the house, but may also be in the garage.
- All plumbing fixtures inside and outside the house
